Someone who is presently technology solution architect and looking forward to lead tech team in next role, delivery projects, design solutions, consult business and clients, be responsible for driving technology decisions, growth of technology wing and tech strategy at organization level.

Reporting to: Chief Executive Officer

You will work on:

- Analyze business pain points and users' needs to arrive at a technology strategy and approach, working independently with multiple stakeholders.
- Arrive at advantages and disadvantages before recommending new tools, techniques and technologies that yield competitive advantage to our customers.
- Direct, develop & deliver the back-end and front-end software as required on different projects.
- Lead team of technology developers and testers, guide and mentor them on the journey.
- Supervise system infrastructure to ensure functionality and efficiency.
- Build development, quality assurance and data protection processes, especially that gels well with the UX design process.
- Monitor KPIs and IT budgets to assess technological performance.
- Onboarding talent and leading our development team.
- Use stakeholders' feedback to inform necessary improvements at company and department level.
- Draw a vision and execution plan for a future technology team at YUJ Designs.

You will love the role if you have:

- Bachelors/ Masters in Computer Science or related field. Advanced degree in management is a plus.
- Should have 10-12 years of experience with minimum 5+ years of work experience in enterprise mobile solutions on iOS/ Android/ Cross Platform (React Native/ Xamarin etc.), including front-end & back-end technologies such as Angular/ React/ Vue JS/ Mendix/ Express JS/ NodeJS/ Python/ PHP.
- Experienced in managing and scaling a technology/ engineering team. Understanding/ work experience of UX is a plus.
- Translate business requirements into architecture roadmap to support digital vision of business.
- Work with business partners, application leads, project management group and other stakeholders to develop architecture and design deliverables.
- Understand enabling components: API integration, security, infrastructure, tools, OS platforms, development environments, user experience for mobile, and operational support.
- Have knowledge of and an interest in the technology trends and advancements (e.g. IoT, AI/ ML, AR & VR, RPA, data analytics, and voice enabled technology).
- Be organized with excellent time management skills while being highly detail oriented.
- Empathy for design driven solutions. Understanding of budgets and business planning.
- Skilled to make a clear and effective presentation in order to influence important design and technology decisions and maintain credibility.
- Must possess excellent interpersonal communication, management, negotiation, presentation and client relation skills.
