

## Angular Developer

We are looking for an Angular JS Developer responsible for the client side of our service. Your primary focus will be to implement a complete user interface in the form of a mobile and desktop web app, with a focus on performance. Your main duties will include creating modules and components and coupling them together into a functional app. The artistic design will be delivered to you, together with a few HTML templates, but we will ask for your help in regard to animations, CSS, and final HTML output. You will work in a team with the back-end developer, and communicate with the API using standard methods. A thorough understanding of all of the components of our platform and infrastructure is required from the candidate.

**Reporting to:** Team Lead

**You will work on:**

- Delivering a complete front end application
- Ensuring high performance on mobile and desktop
- Writing tested, idiomatic, and documented JavaScript, HTML and CSS
- Coordinating the workflow between the graphic designer, the HTML coder, and yourself
- Cooperating with the back-end developer in the process of building the RESTful API
- Communicating with external web services

**You will love the role if you have:**

- Proficiency with Angular 6 above versions, JavaScript and HTML5
- Preferred Typescript, ES6 / 7 knowledge
- Professional, precise communication skills, deep knowledge of Angular JS practices and commonly used modules based on extensive work experience
- Creating self-contained, reusable, and testable modules and components
- Ensuring a clear dependency chain, in regard to the app logic as well as the file system
- Ability to provide SEO solutions for single page apps
- Extensive knowledge of CSS and JS methods for providing performant visual effects and keeping the frame rate above 30fps at all times
- Thorough understanding of the responsibilities of the platform, database, API, caching layer, proxies, and other web services used in the system
- Validating user actions on the client side and providing responsive feedback
- Creating custom, general use modules and components which extend the elements and modules of core AngularJS
- Experience with all levels of operation available to the front-end, such as from creating XHRs in vanilla JS to using a custom wrapper around resource
- Experience with building the infrastructure for serving the front-end app and assets, and documenting the code inline using JSDoc or other conventions
- Architecting and automating the build process for production, using task runners or scripts
- Writing non-blocking code, and resorting to advanced techniques such as multi-threading, when needed, extensive unit tests using automated TDD tasks, and creating e2e test suites for all components, and running them with Protractor (or a well reasoned alternative)
- Creating configuration, build, and test scripts for Continuous Integration environments

**Location:** Remote

**If you wish to apply**

- If you are interested in this position, share with us your latest resume that clearly lists down your technology acumen along with specific output you delivered over the years. Variety across industry and Interface types would be an advantage.
- You may also choose to send us a presentation.
